DATA ANALYSIS REPORT

Sales Performance Report

End-to-end analysis of the Sales Dashboard Power BI model

Data period: 1 October 2026 - 8 October 2026

PREPARED ON	19 October 2026
DATA SOURCE	Power BI Desktop model: Sales Dashboard (live query)
SCOPE	Data model, data quality, sales, product, customer and region analysis, recommendations
PREPARED BY	Data analysis by Claude (Anthropic)

Amounts are in the model's currency units (no currency symbol is stored in the data).

1. Executive summary

TOTAL SALES	TOTAL PROFIT	PROFIT MARGIN
13,100	4,400	33.6%
Quantity x UnitPrice	Sales minus cost	Profit / Sales

ORDERS	AVG ORDER VALUE	UNITS SOLD
8	1,637.50	20
One order per day	Sales / Orders	5 products, 5 customers

Headline. Over the eight days from 1 to 8 October 2026 the business sold **13,100** of goods across 8 orders and earned a profit of **4,400**, a healthy **33.6%** margin. Sales picked up through the period, and the profit pool is concentrated in low-priced accessories rather than in the high-ticket items that generate most of the headline revenue.

Key findings

1. Sales accelerated. The last four days (5-8 Oct) brought in 7,500 versus 5,600 in the first four days, up 33.9%. The best days were 4 Oct (2,500, one Laptop) and 8 Oct (2,400, two Monitors).

2. Accessories are the profit engine. Accessories are 41.2% of sales but 54.5% of profit, at a 44.4% margin. Mouse has the best margin (50%) and Keyboard follows (40%).

3. High-ticket items dilute margin. Laptop is 19.1% of sales but only 11.4% of profit (20% margin). Monitor earns 25%. Both sit well below the 33.6% average.

4. West drives the revenue. West contributes 62.6% of sales (8,200) and North 37.4% (4,900). South and East have no recorded sales.

5. Revenue is concentrated. The top two customers (Rahul Sharma and Amit Verma) account for 51.9% of sales, and the top two products (Monitor and Keyboard) for 50.4%.

6. Repeat buying is a strength. Three of five customers ordered twice (Rahul, Priya, Amit). They placed 6 of the 8 orders (75%).

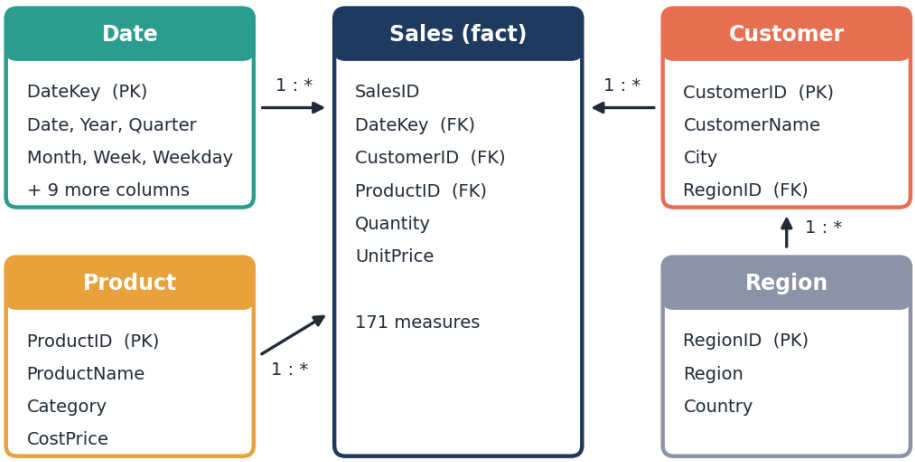

7. Data is clean and reconciles. No duplicate IDs, blanks or broken relationships. Model totals match an independent recalculation exactly.

Recommended actions

- Push accessory bundles (Keyboard + Mouse) with every Monitor or Laptop sale to lift margin per order.
- Review pricing and supplier cost on Laptop and Monitor: each 1-point margin gain on their 6,100 of sales adds 61 of profit.
- Broaden the customer base and convert the two single-order customers (Sneha Joshi, Karan Singh) into repeat buyers.
- Confirm whether South and East are inactive territories or missing data before investing there.
- Load at least 13 months of history so the year-over-year, rolling 12-month and fiscal measures already built in the model can produce results.

2. Data model and data quality

The report is built on a star-schema Power BI model. One fact table (**Sales**) is filtered by four dimension tables. Time-intelligence logic runs through a dedicated, marked **Date** table.

Tables

Table	Type	Rows	Columns	Role
Sales	Fact	8	6	One row per sales transaction (date, customer, product, quantity, unit price)
Customer	Dimension	5	4	Customer name, city and region link
Product	Dimension	5	4	Product name, category and unit cost price
Region	Dimension	4	3	Region (West, North, South, East) and country
Date	Dimension (calculated)	365	16	Calendar for 2026; marked as the model's date table

Relationships

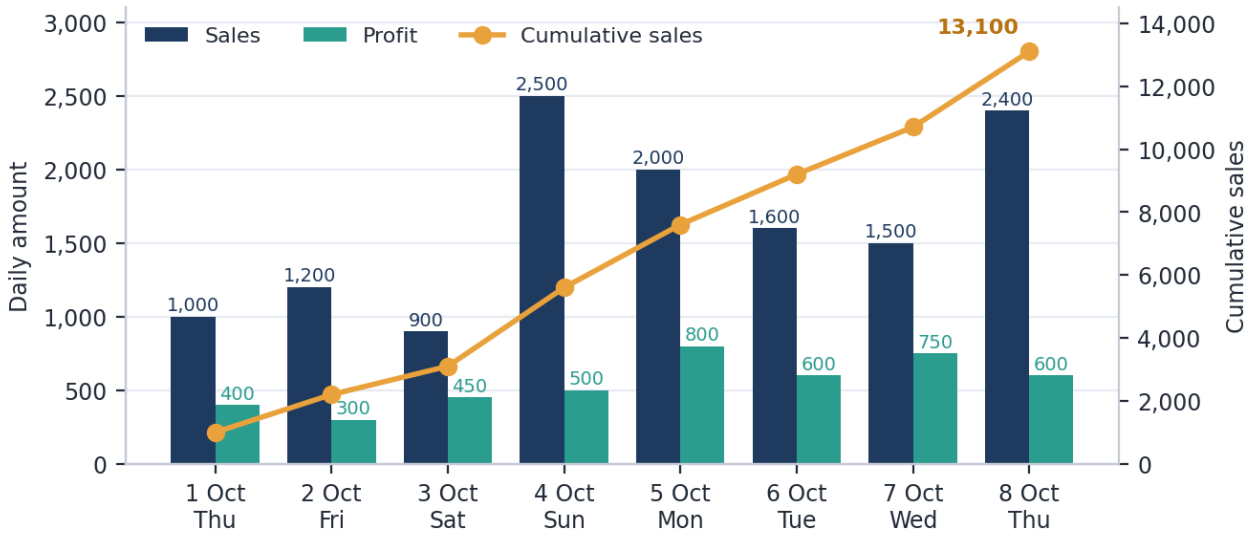

From (many)	To (one)	Key	Filter direction
Sales	Date	DateKey	Single (Date to Sales)
Sales	Customer	CustomerID	Single
Sales	Product	ProductID	Single
Customer	Region	RegionID	Single (Region filters Sales through Customer)

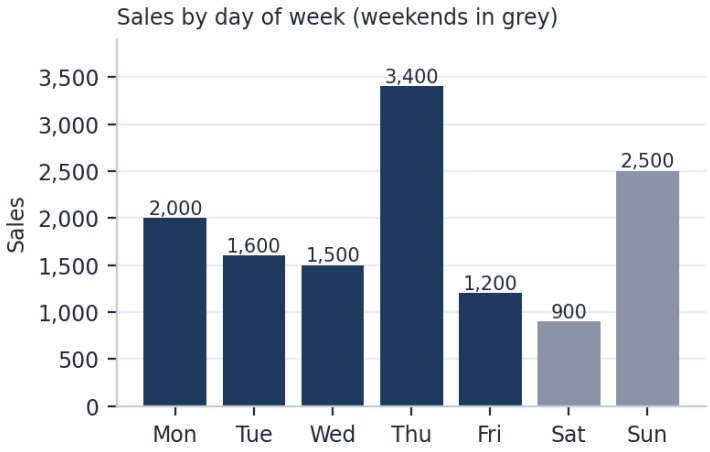

Data quality checks

Check	Result	Status
Duplicate SalesID values	0 (8 rows, 8 distinct IDs)	Pass
Blank DateKey, Quantity or UnitPrice	0 blanks	Pass
Sales rows with no matching customer, product or date	0 orphan rows	Pass
Customers / products with sales	5 of 5 / 5 of 5	Pass
Regions with sales	2 of 4 (South and East have none)	Note
Totals: model measures vs independent recalculation	Sales 13,100, Cost 8,700, Profit 4,400 match	Pass
History available	8 days (1-8 Oct 2026); Date table spans all of 2026	Note

3. Sales performance over time

Daily sales and profit, with cumulative sales running total (right axis).

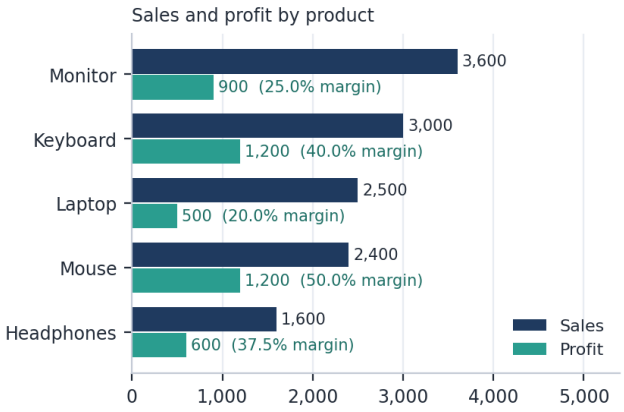

Reading the trend

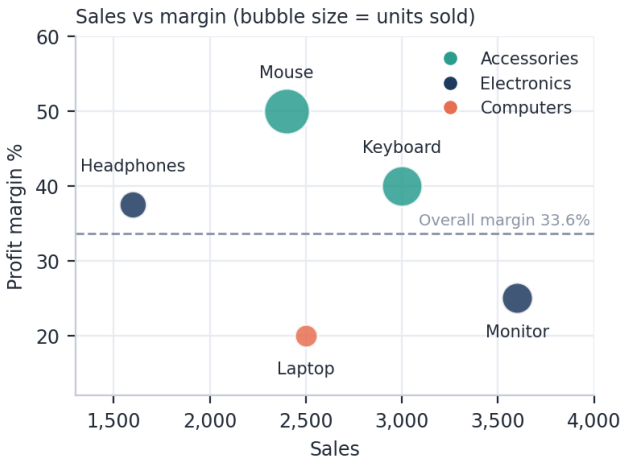

- **Average day:** 1,637.50 of sales and 550 of profit (8 trading days).
- **Best day:** 4 Oct, 2,500 (Sunday, one Laptop). **Weakest day:** 3 Oct, 900 (Saturday).
- **Momentum:** 7,500 in the last four days versus 5,600 in the first four (+33.9%).
- **Weekdays vs weekends:** Monday to Friday delivered 9,700 (74.0%); the weekend 3,400 (26.0%), lifted by the Sunday Laptop sale.
- **Order size drives revenue:** every day had exactly one order, so daily sales depend on order value, not order count.
- **Read the weekday chart with care:** Thursday occurs twice in this 8-day window (1 and 8 Oct), so its 3,400 is two days, not one.

Daily detail

Date	Day	Product	Units	Sales	Profit	Margin
01 Oct 2026	Thursday	Keyboard	2	1,000	400	40.0%
02 Oct 2026	Friday	Monitor	1	1,200	300	25.0%
03 Oct 2026	Saturday	Mouse	3	900	450	50.0%
04 Oct 2026	Sunday	Laptop	1	2,500	500	20.0%
05 Oct 2026	Monday	Keyboard	4	2,000	800	40.0%
06 Oct 2026	Tuesday	Headphones	2	1,600	600	37.5%
07 Oct 2026	Wednesday	Mouse	5	1,500	750	50.0%
08 Oct 2026	Thursday	Monitor	2	2,400	600	25.0%
Total			20	**13,100**	**4,400**	**33.6%**

4. Product and category analysis

Category: share of profit vs share of sales

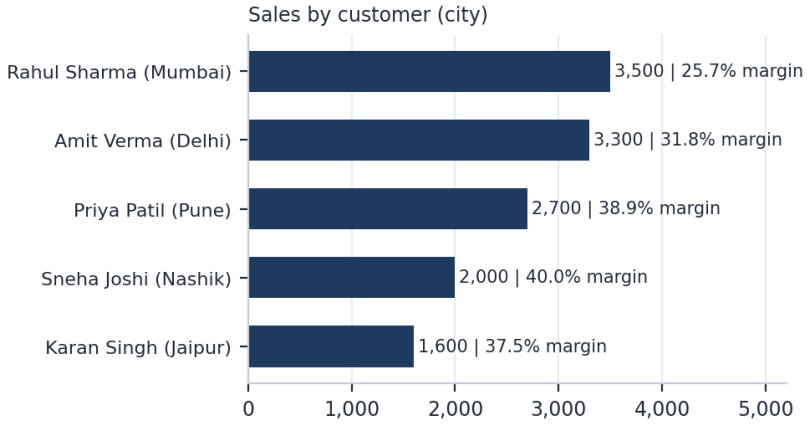

Product scorecard

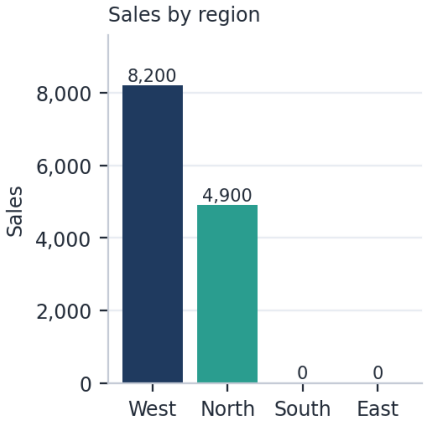

Product	Category	Units	Orders	Sales	% of sales	Profit	% of profit	Margin
Monitor	Electronics	3	2	3,600	27.5%	900	20.5%	25.0%
Keyboard	Accessories	6	2	3,000	22.9%	1,200	27.3%	40.0%
Laptop	Computers	1	1	2,500	19.1%	500	11.4%	20.0%
Mouse	Accessories	8	2	2,400	18.3%	1,200	27.3%	50.0%
Headphones	Electronics	2	1	1,600	12.2%	600	13.6%	37.5%

What this tells us

- **Monitor** is the top seller by revenue (3,600, 27.5%) but returns only a 25% margin.
- **Mouse** has the highest margin (50%) and the most units (8). Its 1,200 profit equals Keyboard's on 400 less revenue.
- **Laptop** sold once for 2,500 but earned just 500 of profit, the lowest margin (20%) in the range.
- **Accessories** make 54.5% of profit from 41.2% of sales. Growing their attach rate is the most direct lever on margin.

5. Customer and region analysis

Customer scorecard

Customer	City	Region	Orders	Units	Sales	% of sales	Profit	Margin
Rahul Sharma	Mumbai	West	2	3	3,500	26.7%	900	25.7%
Amit Verma	Delhi	North	2	5	3,300	25.2%	1,050	31.8%
Priya Patil	Pune	West	2	6	2,700	20.6%	1,050	38.9%
Sneha Joshi	Nashik	West	1	4	2,000	15.3%	800	40.0%
Karan Singh	Jaipur	North	1	2	1,600	12.2%	600	37.5%

Region summary

Region	Customers	Cities	Orders	Sales	% of sales	Profit	Margin
West	3	Mumbai, Pune, Nashik	5	8,200	62.6%	2,750	33.5%
North	2	Delhi, Jaipur	3	4,900	37.4%	1,650	33.7%
South	0	-	0	0	0.0%	0	-
East	0	-	0	0	0.0%	0	-

What this tells us

- **Two customers carry half the revenue.** Rahul Sharma (3,500) and Amit Verma (3,300) together are 51.9% of sales. Losing either would hit results hard.
- **Margins are healthy and consistent across regions** (West 33.5%, North 33.7%). The difference between regions is volume, not profitability.
- **Customer margin follows product mix.** Sneha Joshi (40.0%, Keyboards only) and Priya Patil (38.9%, mostly Mouse) are the most profitable. Rahul Sharma (25.7%, includes a Laptop) and Amit Verma (31.8%, includes Monitors) earn less.
- **Customer and city are one-to-one in this data** (each city has exactly one customer), so city and customer results are identical.
- **South and East show no sales.** Check whether these territories have no customers or whether their data is not yet loaded.

6. Recommendations, risks and next steps

Prioritised recommendations

#	Recommendation	Evidence from the data
1	**Bundle accessories** (Keyboard + Mouse) with Monitor and Laptop orders.	Accessories margin 44.4% vs Electronics 28.8% and Computers 20.0%. Accessories deliver 54.5% of profit.
2	**Review Laptop and Monitor pricing and supplier cost.**	Margins of 20% and 25% are below the 33.6% average. These two products are 6,100 of sales, so each margin point is worth 61 of profit.
3	**Protect and broaden the customer base.** Follow up with single-order customers.	Top two customers are 51.9% of sales. Sneha Joshi and Karan Singh ordered once each; three customers already reorder.
4	**Investigate South and East.** Validate data before planning any expansion.	No sales recorded for 2 of 4 regions.
5	**Watch weekend and Saturday demand.**	Saturday was the lowest day (900). The sample is only 8 days, so monitor before acting.
6	**Extend the data history to 13+ months.**	Year-over-year, prior-period, rolling 12-month and fiscal measures are built but return blank until earlier data exists.

Risks and limitations

- **Small sample.** Eight transactions over eight days. Percentages and trends are directional and can move sharply with a single order.
- **Cost basis.** Cost uses each product's current CostPrice, not the actual cost at the time of sale, so historical profit may differ.
- **Not captured in the model.** Discounts, returns, taxes, targets and budgets. Profit is therefore gross profit on list price.
- **Currency.** No currency is stored in the data, so amounts are shown as plain numbers.
- **Date table range.** The Date table covers all of 2026, so rolling and to-date measures behave best when filtered to dates up to 8 Oct 2026.

Suggested next steps for the dashboard

- Build report pages: **Executive overview** (KPI cards, daily trend), **Products** (scorecard, margin bubble), **Customers and regions** (customer and region views), **Trends** (YoY, rolling and fiscal measures once history is loaded).
- Add slicers for Year-Month, Region, Category and Customer, and a conditional-format flag on products whose margin is below the 33.6% average.
- Set up scheduled refresh and agree a target for margin and monthly sales so that variance-to-target measures can be added.

Appendix A. Transaction detail

ID	Date	Customer	City	Product	Units	Unit price	Sales	Cost	Profit
S001	01 Oct	Rahul Sharma	Mumbai	Keyboard	2	500	1,000	600	400
S002	02 Oct	Priya Patil	Pune	Monitor	1	1,200	1,200	900	300
S003	03 Oct	Amit Verma	Delhi	Mouse	3	300	900	450	450
S004	04 Oct	Rahul Sharma	Mumbai	Laptop	1	2,500	2,500	2,000	500
S005	05 Oct	Sneha Joshi	Nashik	Keyboard	4	500	2,000	1,200	800
S006	06 Oct	Karan Singh	Jaipur	Headphones	2	800	1,600	1,000	600
S007	07 Oct	Priya Patil	Pune	Mouse	5	300	1,500	750	750
S008	08 Oct	Amit Verma	Delhi	Monitor	2	1,200	2,400	1,800	600
Total					20		**13,100**	**8,700**	**4,400**

Appendix B. Measure library built in the model

The model contains **171 documented DAX measures**. Every measure, column and table has a description, and each measure formula has PURPOSE and LOGIC comments for new developers.

Group (display folder)	Measures	Examples
Core measures	16	Total Sales, Total Cost, Total Profit, Profit Margin %, Order Count, Average Order Value, Sales YTD
TI 0 Helpers	5	Data Last Date, Anchor Date, Days With Sales
TI 1 To-Date	10	Sales WTD, Quantity / Profit / Orders MTD, QTD, YTD
TI 2 Prior Period	20	Prior Quarter, Month, Week, Day, Year (Sales, Quantity, Profit, Orders)
TI 3 Variance	21	Sales YoY, QoQ, MoM, WoW, DoD change and %; Profit Margin YoY change
TI 4 Rolling	24	Rolling 7D / 30D / 90D / 3M / 6M / 12M; Rolling 12M YoY %
TI 5 Running Total	6	Sales Running Total, Running Total % of Total
TI 6 Period Totals	8	Sales Full Year / Quarter / Month; % of Year / Quarter / Month
TI 7 First-Last Day	6	Sales on first / last day of month, quarter, year
TI 8 Averages and Extremes	16	Avg Daily / Monthly / Weekly, Best Day, Worst Month, Weekend %
TI 9 PY To-Date and Trends	14	YTD / MTD / QTD vs prior year; 3, 6, 12-month moving average
TI 10 Fiscal Year (Apr-Mar)	10	Sales FYTD, FYTD YoY %, Fiscal Year Label, Full Fiscal Year
TI 11 Latest and Relative	15	Sales Latest Day / Month, Today, Last 30 Days, This Month, Last Year

Appendix C. KPI definitions and method

KPI	Definition	DAX logic (simplified)
Total Sales	Revenue: units sold multiplied by unit price	`SUMX(Sales, Quantity * UnitPrice)`
Total Cost	Cost of goods sold at the product's cost price	`SUMX(Sales, Quantity * RELATED(Product[CostPrice]))`
Total Profit	Sales minus cost (gross profit)	`[Total Sales] - [Total Cost]`
Profit Margin %	Profit as a share of sales	`DIVIDE([Total Profit], [Total Sales])`
Order Count	Number of sales transactions	`DISTINCTCOUNT(Sales[SalesID])`
Average Order Value	Average sales per order	`DIVIDE([Total Sales], [Order Count])`
Sales % of Total	Share of sales within the current selection	`DIVIDE([Total Sales], CALCULATE([Total Sales], ALLSELECTED()))`
Sales YTD / FYTD	Year-to-date (calendar) and fiscal year-to-date (financial year ends 31 March)	`TOTALYTD([Total Sales], 'Date'[Date])` and `TOTALYTD(..., "3/31")`

Method and assumptions

- **Source.** All figures were queried directly from the open Power BI Desktop model (Sales Dashboard) with DAX on 19 October 2026.
- **Reconciliation.** Totals from the model's measures were checked against a separate calculation from the transaction rows; they match exactly.
- **Percentages** are shown to one decimal place and may not add to exactly 100% because of rounding.
- **Date table.** The calculated Date table covers every full calendar year found in the data (currently 1 Jan - 31 Dec 2026) and is marked as the model's date table.
- **Fiscal year.** Financial-year measures assume an April to March year (Indian standard). This can be changed in one place per measure.
- **Scope.** This analysis describes what happened (descriptive analytics). With 8 days of data it does not support forecasting or statistical testing.
